Executive Summary

PriceBeo is a Dublin-based mobile app that lets Irish shoppers scan a grocery barcode and get real-time price comparisons across Tesco, Dunnes Stores, SuperValu, Lidl, and Aldi in under two seconds. Grocery prices in Ireland have risen 27% since 2021, yet no practical tool exists for consumers to compare prices at the point of purchase. Our primary research directly confirmed this gap. 96% of respondents identified price as their main grocery factor, 76% regularly overspend due to price uncertainty, and 89% said they would download PriceBeo. This is not a future opportunity. It is a problem happening in every supermarket in Ireland every week.

The Irish grocery market is worth €13 billion annually, with 92% of spend concentrated across the five retailers in our app. No mobile-first comparison platform exists in Ireland. PriceBeo is the first. We validated technical feasibility with a working proof of concept and received independent confirmation from Quidu, Ireland's leading price comparison platform, which confirmed our model works at scale.

The app is free to download. A €2.99 monthly premium subscription unlocks shopping lists comparison, price alerts, and personalised savings reports. Revenue comes from subscriptions, in-app advertising, and retailer affiliate income. The business carries a 92% gross margin throughout. PriceBeo projects €99,440 revenue in Year 1, profitability in Year 2 with €93,482 net profit, and €938,625 revenue by Year 3.

Five co-founders lead the business, each holding a 20% equity stake, covering CEO, COO, CFO, CTO, and CMO functions. The COO's placement at Aldi provided direct exposure to the problem PriceBeo solves. The CTO has validated the technical architecture. A software engineering advisor, a corporate law solicitor, and a retail industry expert support the team.

PriceBeo does not ask consumers to change their shopping habits. It removes the friction that stops them from acting on a decision they are already trying to make.

‘Scan, Compare, Save’

Introduction

Background and Purpose of This Plan

This business plan has been prepared by the founding team of PriceBeo in support of an application to Enterprise Ireland for seed investment. It outlines the company's product proposition, target market, commercial strategy, operational structure, and financial projections for the period 2027 to 2029.

PriceBeo was developed in response to a clear and persistent problem within the Irish grocery market: consumers are highly price-sensitive, yet lack the tools to make informed purchasing decisions in real time. This insight is grounded in both lived experience and structured market validation.

Primary research conducted by the founding team confirmed strong demand for a solution.

Primary Research Findings

- **96%** of respondents identified price as their main factor in grocery decisions
- **77%** reported difficulty knowing whether they were getting the best value.
- **75.6%** visited multiple stores to compare prices,
- **76%** admitted to regularly overspending due to uncertainty.
- When introduced to PriceBeo, **98%** found the concept useful
- **89%** indicated they would download the app.

These findings demonstrate a clear disconnect between consumer intent and capability. PriceBeo converts that unmet intent into immediate action.

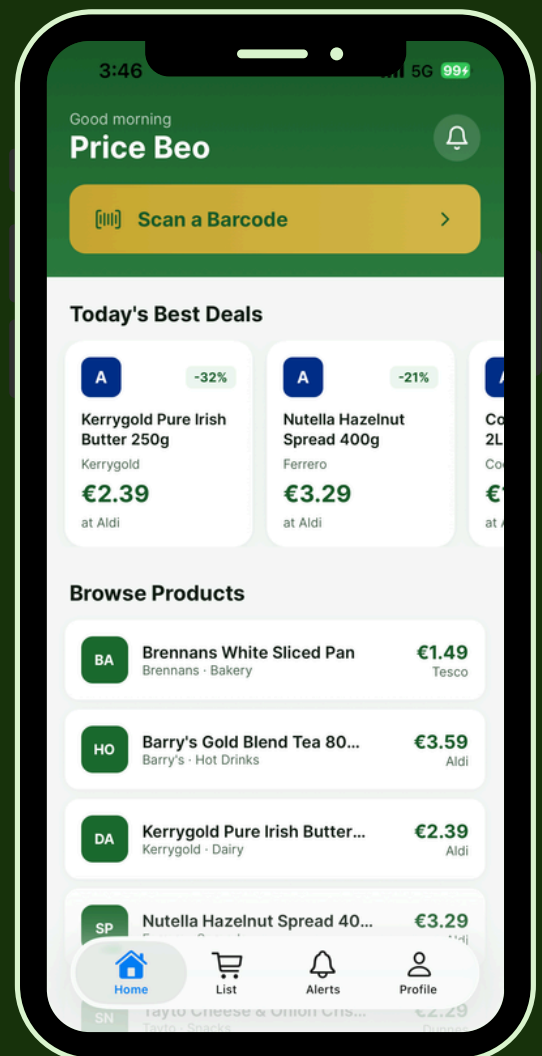

The Business - Product and Advantage

PriceBeo is a mobile application that allows users to scan a grocery product barcode and receive a ranked, real-time price comparison across Tesco, Dunnes Stores, SuperValu, Lidl, and Aldi within seconds.

The product is designed specifically for in-store use, recognising that purchasing decisions are made quickly and under time pressure. Unlike existing comparison tools, which are desktop-based or slow to use, PriceBeo integrates directly into the consumer's shopping process, enabling immediate decision-making.

The application operates on a freemium model. Core functionality is provided free of charge to maximise adoption, while a premium subscription (€2.99 per month) offers enhanced features including shopping lists comparisons, price alerts, and personalised savings insights.

Price Beo's competitive advantage lies not simply in access to price data, but in its ability to deliver that data in a way that aligns with real consumer behaviour. Over time, the product is designed to become a habitual tool within the weekly shopping routine, increasing retention and long-term engagement.

Company Description

Promoters, Shareholders and Board

PriceBeo operates with a flat, co-founder-led structure consistent with best practice for a capital-efficient software startup at the pre-Series A stage. Each co-founder holds an equal 20% equity stake and carries executive responsibility for a defined functional area. All five founders sit on the board of directors and operate by consensus on all material decisions. There are no management layers between the board and individual contributors at this stage.

20% equity stake	20% equity stake	20% equity stake	20% equity stake	20% equity stake

Advisors

PriceBeo is supported by a focused advisory group aligned with its early-stage needs:

These advisors provide targeted expertise in retail strategy and governance, reducing execution risk and strengthening the company's ability to scale. Critically, they provide access to networks and relationships that would otherwise take years to build independently.

These advisors won't be compensated with equity; they will be paid based on deliverables and consultation hours.

Advisors	Specialism	Role
Software Engineer	Technical Development & Architecture	Development & Architecture Provides technical oversight on app development, supports MVP build quality, and ensures scalability of the platform architecture.
Justin Cody	Corporate Law Solicitor	Advises on company structure, shareholder agreements, GDPR compliance, intellectual property, and legal documentation.
Dan Ryan	Retail Industry Expert	Provides market intelligence on Irish grocery retail, supports retailer data access strategy, and facilitates potential commercial partnerships.

Products and Services

PriceBeo is a mobile application that enables real-time grocery price comparison through barcode scanning. The system is built on a cloud-based architecture that integrates barcode recognition, retailer price data, and a structured database to deliver instant price comparisons at the point of purchase.

The system has been designed to prioritise speed, accuracy, and scalability, ensuring it can support growth from 15,000 to 75,000+ users without requiring fundamental re-architecture.

1. EAN-13 Barcode Recognition (User Input Layer)

Users scan a product using their smartphone camera
 Google ML Kit processes the image on-device
 The barcode is decoded into a standardised EAN-13 identifier
 Detection time: <1-2 seconds

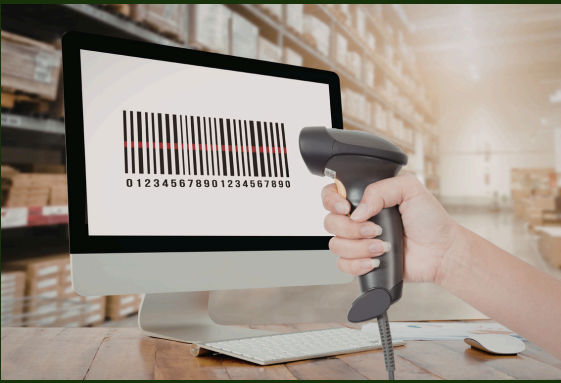

Technical Insight:

EAN-13 is a universal product identification system used across all major grocery retailers. This ensures consistent mapping across multiple retailer datasets.

Value:

No manual input required
 Enables real-time usage in-store
 Eliminates user friction at the point of decision

2. API Request Layer (Data Retrieval Trigger)

The scanned barcode is sent to a cloud-hosted REST API. The API acts as the central processing layer. It receives the product ID and triggers database queries.

Technical Insight:

The API is stateless and scalable, allowing concurrent requests from thousands of users without performance degradation.

Value:

Instant request handling

Enables real-time comparison across multiple data sources

3. Retailer Data Ingestion Pipeline (Data Collection Layer)

PriceBeo maintains a continuously updated dataset of grocery prices across five retailers:

- Tesco
- Dunnes Stores
- SuperValu
- Lidl
- Aldi

How it works:

Automated scripts collect product data from official retailer listings

Data is refreshed every 24 hours

Price, product name, size, and category are captured

Data is cleaned and standardised to ensure consistency

Technical Insight:

Structured ingestion pipeline with validation rules

Detects anomalies (e.g. missing prices, extreme price changes)

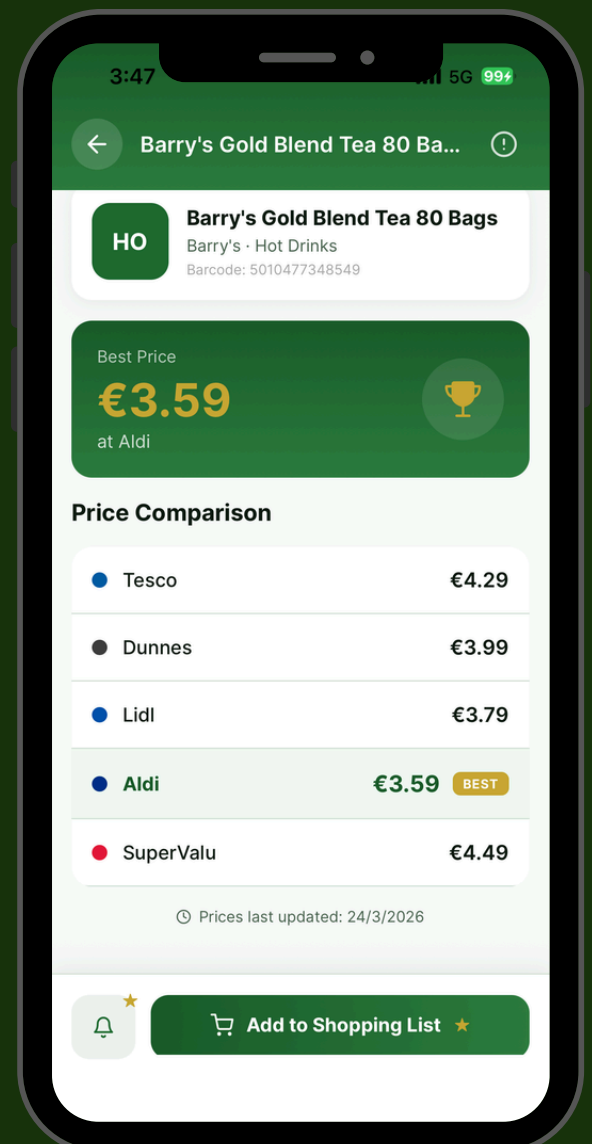

Ensures uniform formatting across all retailers

Value:

Ensures high data accuracy

Maintains user trust

Enables reliable cross-retailer comparison

Centralised Database (Processing Layer)

Product & Pricing Data in PostgreSQL

4. Centralised Database (Processing Layer)

- All product and pricing data is stored in a PostgreSQL relational database
- Structured across multiple tables:
 1. Product ID (linked to barcode)
 2. Retailer pricing table
 3. Product descriptions
 4. Category classification

Performance:

Query time: <10 milliseconds

Indexed for high-speed lookup

Designed for horizontal scalability

Technical Insight:

The relational structure ensures that a single barcode can map to multiple retailer entries, enabling simultaneous comparison across all stores.

Value:

Fast response times

Scalable infrastructure

Supports high user volumes

5. Real-Time Comparison Engine (Output Layer)

- The API queries the database across all five retailers simultaneously
- Results are processed and returned as:
 1. Ranked price list (lowest → highest)
 2. Identification of the cheapest option
 3. Price differences between retailers

Fallback Logic:

If no exact product match exists:

The system identifies a comparable alt.

Matches based on:

product category

size/weight

brand similarity

Technical Insight:

This requires rule-based matching logic to ensure relevance and avoid misleading comparisons.

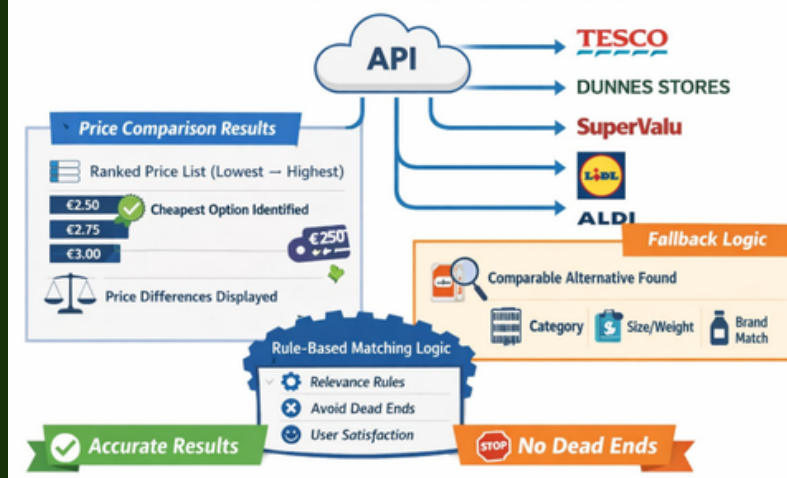

Value:

Ensures user always receives a result

Prevents dead-end searches

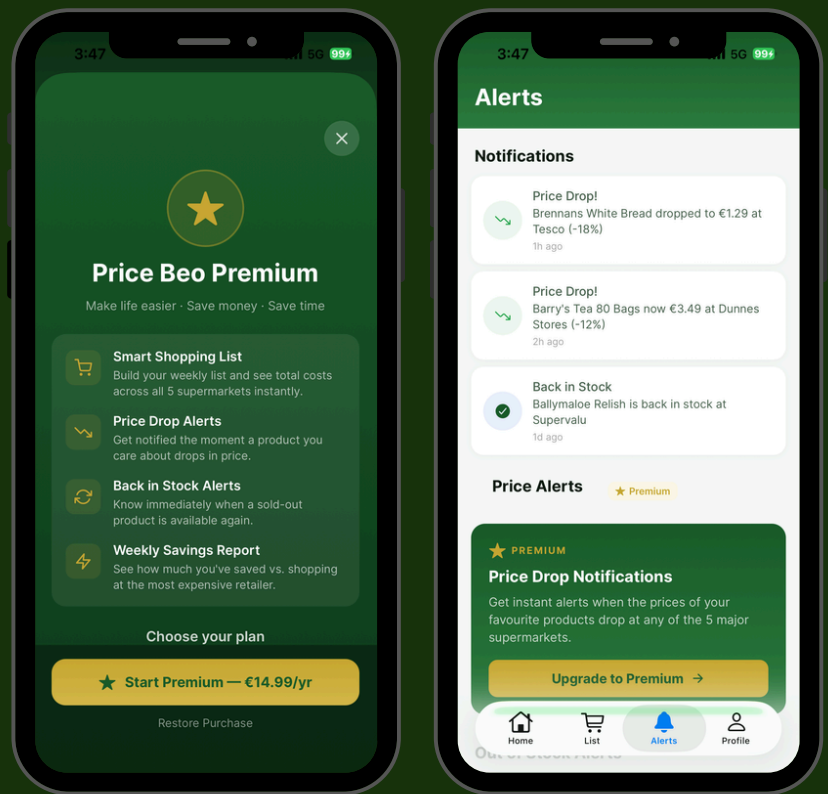

Enhances usability

Real-Time Comparison Engine (Output Layer)

Premium Features (€2.99/month)

- Premium functionality extends the core system:
- Shopping list Comparison
- Calculates total basket cost across retailers
- Price Drop Alerts
- Tracks items and notifies users of price reductions
- Back-in-Stock Alerts
- Notifies when unavailable products return
- Personalised Savings Reports
- Tracks and summarises weekly savings

Acknowledged Limitations and Risk Mitigation

The single most critical risk for PriceBeo is user trust in price accuracy. As the platform directly influences purchasing decisions, any perceived inaccuracy could produce disproportionate reputational damage at this early stage.

This risk is mitigated through automated data validation, daily accuracy monitoring, and a structured retailer partnership programme beginning in Year 1.

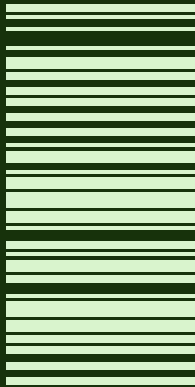

Additional risks include dependence on third-party retailer data and potential discrepancies between online and in-store pricing. These are addressed through automated validation systems and investment in direct retailer relationships, transforming a structural vulnerability into a long-term competitive advantage as partnerships are secured.

Long-Term Aim

PriceBeo aims to become the default grocery decision-making tool in Ireland. As user adoption increases, the platform will generate aggregated pricing insights, creating a proprietary data advantage that enhances value for users and strengthens market positioning over time. This data asset represents a secondary, long-term competitive moat beyond the initial product functionality.

S

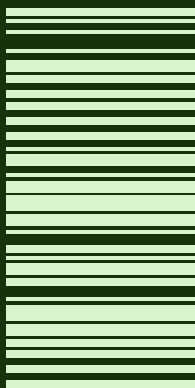

Strength

- Validated demand — 89% of respondents would download the app, confirming strong product-market fit before launch.
- Behaviour-aligned design reduces adoption friction by integrating into an existing shopping routine rather than requiring new habits.
- Cloud-based architecture enables rapid scaling with low marginal cost, supporting a high-margin operating model.
- First-mover advantage in a mobile-first grocery comparison space with no direct competitor at the point of purchase.

W

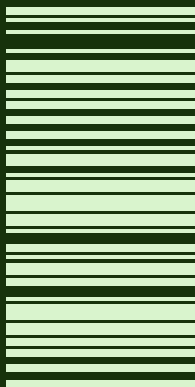

Weakness

- Lack of initial brand equity creates a short-term customer acquisition challenge, requiring front-loaded marketing investment to establish trust.
- Dependence on third-party retailer data introduces a structural vulnerability, requiring long-term mitigation through partnerships and automated validation systems.
- Pre-revenue status increases reliance on investor confidence, making early traction milestones critical to securing further funding

O

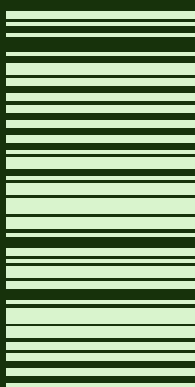

Opportunities

- Grocery prices up 27% since 2021 have produced record consumer price sensitivity, creating durable, long-term demand for cost-saving tools.
- Absence of a fast, mobile-first comparison platform in Ireland represents a clear and uncontested market gap.
- Freemium model lowers barriers to entry across all demographics, accelerating user acquisition without marketing spend dependency.

T

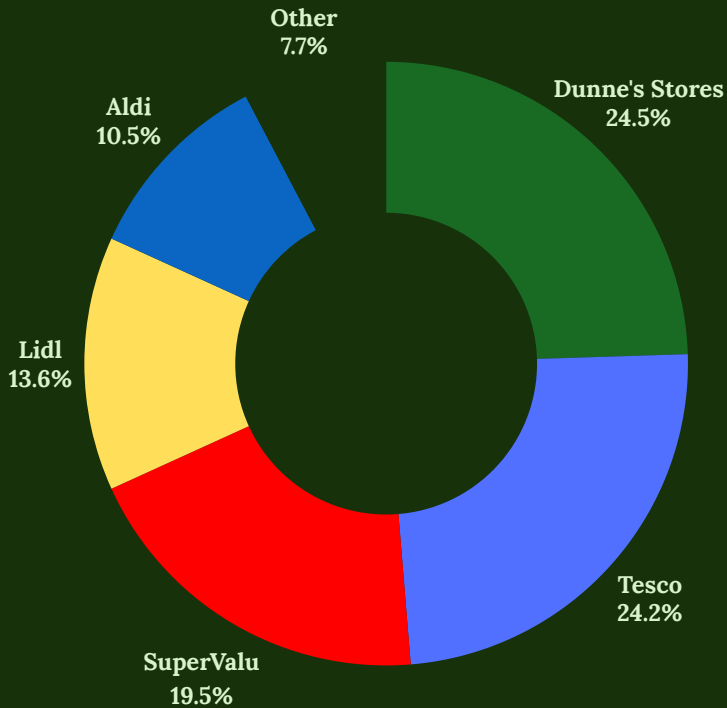

Threats

- Retailer data access restrictions could limit coverage or accuracy, directly undermining the core value proposition.
- Entry of larger, better-resourced competitors replicating the model with greater brand recognition and distribution.
- User trust is highly sensitive to perceived inaccuracy; a single data error can produce disproportionate reputational damage at an early stage.

Market Analysis

Total Market Valuation

Retail consumption is a major economic activity in Ireland and estimates suggest that turnover in the retail economy can total **€60bn annually**, accounting for approximately 12% of Ireland's GDP (CBRE, 2025).

92.3% of the market is controlled by 5 retailers: Tesco, Dunnes Stores, Lidl, Aldi and Supervalu (Kantar, 2026).

Target Market: PriceBeo is targeting everyone in Ireland as the app is accessible for anyone to use. In particular PriceBeo are targeting people who face financial difficulties and high expenses. This ranges from middle-aged parents with young children to college students who are trying to scrape enough money together for the weekly shop.

Families

Busy Adults

Students

Market Trends

War in Iran: Tensions have been escalating between the U.S and Iran which has resulted in a war breaking out in Iran. The war could have implications for PriceBeo's future business. It's unknown how long the war will last, however what is certain is that the longer it lasts, the larger the impact on consumers. The cost of diesel has exceeded €2 a litre at the pumps as of mid-March (Howard, 2026). The most immediate economic effect has been rising energy prices, but ongoing conflict in the Middle East is expected to push overall price levels higher across the economy. Along with increased oil and gas costs, grocery prices are also likely to climb (Howard, 2026). This financial strain faced by consumers will make PriceBeo an even more viable option for consumers looking to budget and save money. While the war may have negative implications for consumers, it could enhance profitability for PriceBeo.

Increased inflation: The Irish grocery retail market is experiencing significant pressure as consumers face increased cost-of-living concerns, rising costs and an increasing need for value. The Competition and Consumer Protection Commission CCPC 2025 have stated that grocery prices in Ireland have increased by 27% since 2021, with non-alcoholic beverage and food prices rising a further 4.6 percent between June 2024 and June 2025 (CCPC, 2025). This consistent inflation places significant pressure on households and has increased demand for transparency and accurate pricing information. The Irish Times 2025 also reports grocery inflation reaching 6.5 percent, consistently outpacing general inflation (Pope, 2025). These economic trends strongly support the need for a real-time price comparison app like PriceBeo.

Meeting future demands: PriceBeo will continue to adapt to the market and needs of their consumers. PriceBeo recognises the importance of flexibility and contingency planning. PriceBeo will put contingency plans in place to prepare for any sudden changes in the market. PriceBeo will also regularly engage with their customers through surveys, emails, customer polls, social media and competitions to ensure that we can adapt our product to our consumers' needs.

How will the Iran war affect the cost of your supermarket shop?

Shopping basket experiment: 'My grocery prices have soared'

Updated / Thursday, 20 Mar 2025 11:02

Profile of Competitors - Quidu

Quidu: Our sole competitor in the market is 'Quidu'. Quidu operate a website that compares the prices of groceries across some of the major retailers in Ireland.

Flaws: Quidu does not compare to PriceBeo. It is visually unappealing, has outdated info, unrelated ads and is slow and time consuming to use.

Revenue/Profitability: Quidu operates a free website and they do not generate any revenue or profits.

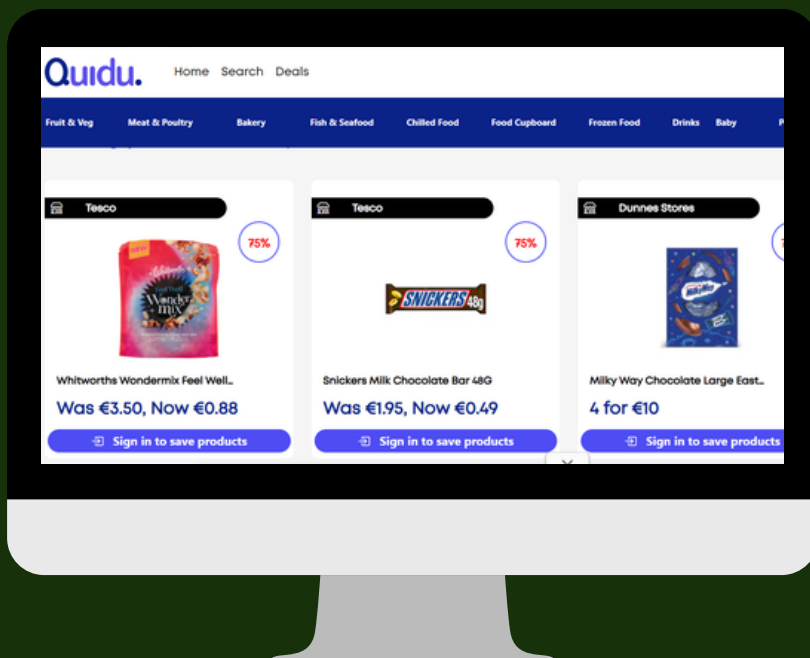

Company size: 2 employees/founders

Ben O'Brien: AI adoption in life sciences

Oxin McKittrick: Senior developer in the Software industry.

Competitor Analysis Table

Competitive Advantage

Unique features free

Premium features €2.99

Consumers will choose PriceBeo because of the value that we can provide them.

Free features: PriceBeo uses a barcode scanner that allows users to scan the barcode of any product in the store. Once a product's barcode has been scanned it instantly compares the price of the exact item across all five major Irish retailers and also suggests similar cheaper alternatives across all stores.

Premium features:

Shopping basket: This feature allows users plan their weekly shop in advance and find the best deals before they have left their house. Users can add a list of products e.g. 15 regular items such as milk, chicken, rice, etc to their weekly basket. Users can update and change this basket as needed. The feature will then calculate the total cost of your personalised basket and show you how much it would cost in each of the five major retailers.

Smart shopping lists: PriceBeo will track items that you scan regularly and it will tailor and suggest personalised shopping lists based on your needs and preferences.

Benefits to Clients

Product recommendations: PriceBeo will recommend products to you based on what you scan regularly. If you regularly scan pasta you will receive recommendations for which store to find the cheapest pasta sauce.

Price-drop notifications: PriceBeo will notify you of any deals, price-drops, or discounts that are being offered across the major retailers. These notifications will be tailored based on your scanning history.

Ad-free: Users who pay for premium will not be interrupted by any advertisements.

Entry to win prizes: Premium users will be entered into draws to win prizes including store vouchers, hampers and more.

Marketing/Sales Strategy

Pricing

Freemium model: The freemium model works well for PriceBeo as it ensures all customers can use our product and users can choose to upgrade to the premium version of the app for €2.99 a month.

€2.99 a month for 12 months totals at €35.88 a year. This is cheaper than the cost of a cup of coffee every day for a week. Our Cost per user acquired is €1.31 which was taken into account when deciding price. From sample pilots and surveys conducted PriceBeo estimate a 2027 year-end of 10,950 free users and 4,050 premium users. PriceBeo also decided on €2.99 month based on customer feedback from interviews and surveys conducted.

Interview Data

Question: Would you be willing to pay a monthly subscription to use this app and if so, how much?

Interview 1: Male Customer, Age 63

I would be willing to pay a small amount if it did save money, no more than €5 a month

Interview 2: Female Customer, Age 60

If it was easy to use and beneficial then I would pay a monthly subscription for it. Probably about €2–€4.

Interview 3: University Student, Age 21

I think €4.99 a month, I'd pay that if it was saving a good amount.

I would be willing to pay a small amount if it did save money, no more than €5 a month.

If it was easy to use and beneficial then I would pay a monthly subscription for it. Probably about €2–€4

I think €4.99 a month, I'd pay that if it was saving a good amount.

The fitness app 'Strava' aren't direct competitors of PriceBeo but their pricing strategy works in a similar way. Strava operate a freemium model which tracks basic workouts for free and a premium tier for €7.99 a month for advanced analytics and performance metrics. With a turnover in 2024 of \$300 million their pricing strategy seems to work well (Tracxn, 2026). PriceBeo charge less than Strava and provided more value to customers, showing that PriceBeo's pricing strategy will be successful.

Marketing and Communications Strategy

PriceBeo Marketing Methods

- ✗ Newspapers
- ✗ Television
- ✓ Social media
- ✓ Influencer collaborations
- ✓ Podcasts
- ✗ Billboards
- ✓ Search engine optimisation (SEO)
- ✓ Email marketing

Television, newspapers and billboards are too expensive. These methods are often poorly targeted, and difficult to measure particularly on a small budget. PriceBeo need to reach a large nationwide audience on a small budget.

A **digital-first strategy** using influencers, podcasts, email marketing, SEO and social media will deliver far greater reach and measurable results. These methods are also cheaper and much more cost effective.

Staff: PriceBeo staff will do a lot of the marketing and social media work, particularly at the beginning of the marketing journey. We will set-up social media accounts for PriceBeo and make some basic advertisements. PriceBeo will also be working with social media influencers and podcasters to boost engagement. PriceBeo staff will also contact as many friends, family members, neighbours and acquaintances as possible and convince them to download the app.

Personalised ads: Ads from competitor Quidu are completely random and unrelated to their product. PriceBeo will work with Irish brands to make sure that the advertisements shown are relevant to the Irish consumer. By doing this PriceBeo are also showing how they are supportive of local businesses. Two businesses that PriceBeo have already gotten on board are Kerrigans Butchers and Kelly Lou cakes

Revenue Sources				
	Irl	EU	US	Rest of World

Email Marketing: PriceBeo will utilise email marketing to maintain engagement with users. Users will receive daily and weekly emails including reports of the super savings that they have made by using PriceBeo. Users that do not use PriceBeo frequently will receive emails showing them the deals that they are missing out on by not using PriceBeo. More seasonal emails will also be sent out during busy retail periods including New Year, Easter, Christmas, Halloween and Summer.

PriceBeo

Your Weekly Savings Report

Hi John,

Here's your weekly savings report. This week, you saved **€16.75** on your grocery shopping thanks to PriceBeo! Keep up the great work! Here are the savings you made:

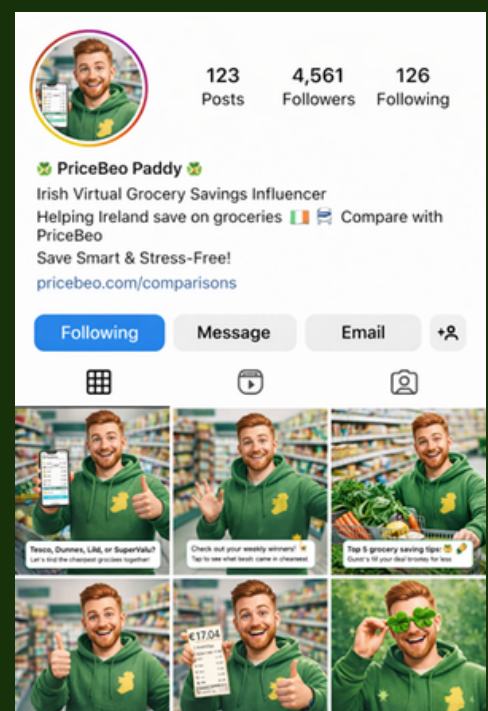

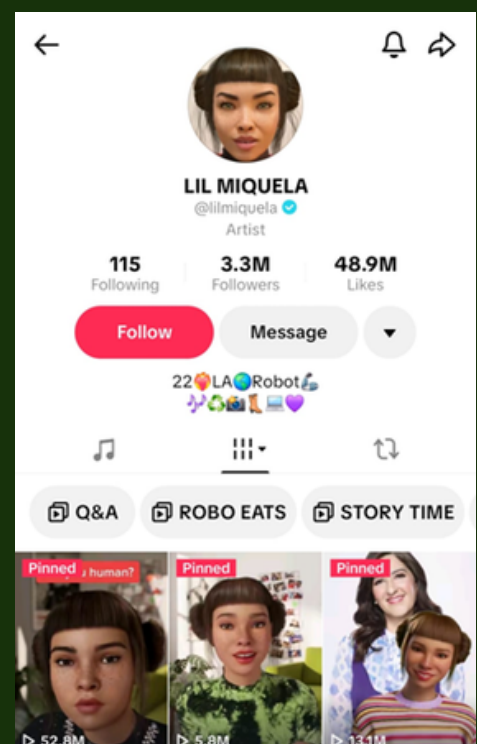

Weekly Savings Summary		
Week of May 20th - May 26th		
Item	Original Price	Savings
Bread	€2.15	€1.20
Milk	€1.15	€1.00
Vegetables	€4.25	€3.75
Chicken	€6.99	€5.00
Eggs	€4.50	€2.15
Burgers	€5.75	€3.65
Total Savings		€16.75

Virtual Influencer:

AI-generated influencers can generate high-engagement with low risk (Hwang et al., 2024). Studies show that organic Instagram posts from a virtual influencer often receive more positive emojis and likes than human influencers (Hwang et al., 2024).

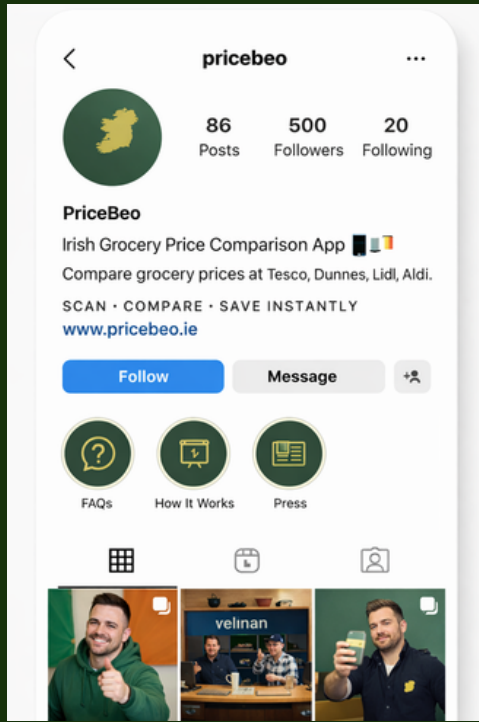

One such virtual influencer is Lil Miquela who has 3.3 million followers on TikTok and 2.3 million on Instagram. All of this content is completely AI-generated, and no real humans feature on any post. This highlights the marketing potential that virtual influencers can have. PriceBeo will use this modern and cheap strategy to appeal to its target audience. This will appeal most to the tech-savvy consumers between 18-30. PriceBeo will also create their own virtual influencer known as PriceBeo Paddy.

PriceBeo Paddy is a creative and low-cost method of engaging with the target audience. PriceBeo Paddy will post regularly about the savings that can be achieved by using PriceBeo and also about prizes, giveaways and events that PriceBeo will be launching like the 'scan it & prove it' social media challenge. It will also post seasonal content that keeps up with events throughout the year, such as during summer it will post 'fancy a BBQ?, use PriceBeo for cheap and tasty savings'. Or even on a Friday afternoon – 'Fancy some cheap treats? – use PriceBeo today'. The combination of real and virtual influencers will ensure success for PriceBeo.

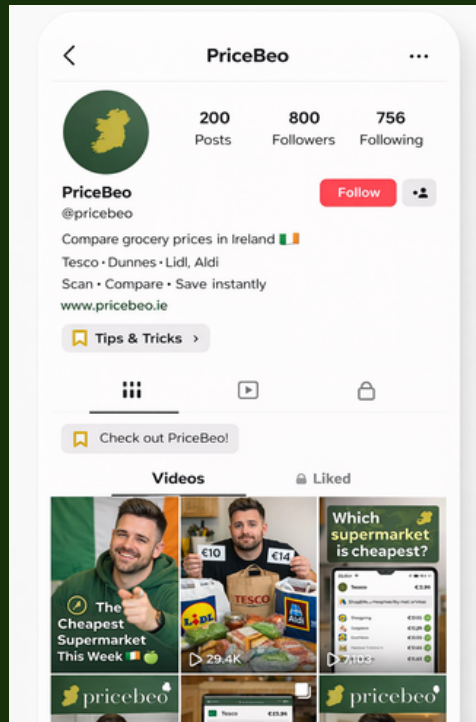

Social Media

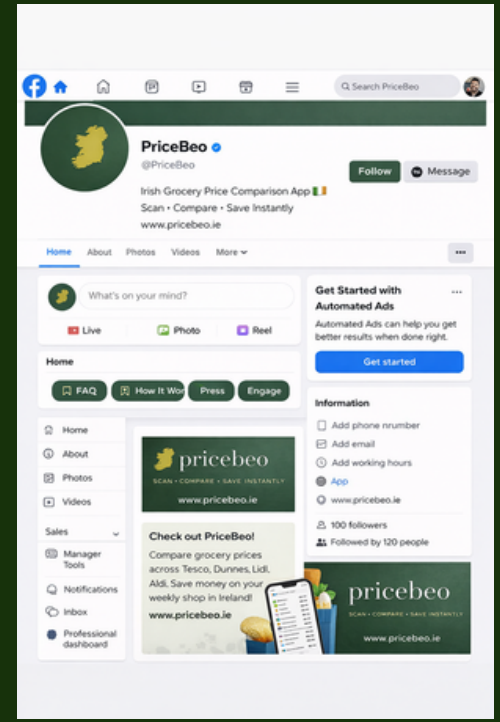

PriceBeo will post content regularly on their own social platforms including Instagram, TikTok and Facebook.

Instagram

TikTok

Facebook

Analysis of PriceBeo's Sales Strategy

PriceBeo's website supports all marketing efforts, with links from social media, podcasts and influencers directing users to download PriceBeo.

Cost: Running the website involves relatively low expenses like development, and digital marketing and is much cheaper than physical sales channels.

Target market: It efficiently reaches the target market including parents and college students who are actively online. By targeting users searching for grocery savings, it allows highly focused customer acquisition.

Control: As PriceBeo owns the website it has full control over pricing and branding.

Logistics: As PriceBeo is using a website there are no physical logistics like inventory and delivery, which reduces complexity and allows for easy scaling.

Advertising & Promotion

1. New Year New Savings - January

PriceBeo will launch a 'New Year New Savings' campaign in January of 2027. After the expensive Christmas period in December, January is a time when families have limited finances and prioritise savings. Approximately 42% of Irish households use some type of credit for Christmas expenditure, up from 31% in 2020 (Wpadmin, 2025). The average credit-funded Christmas expense is €890, usually repaid over 3-4 months (Wpadmin, 2025). Consumers will have limited finances entering the new year and will be struggling to maintain restricted budgets.

PriceBeo is aware that this is a perfect opportunity to promote their new app. PriceBeo will emphasis how the app can be used to make big savings at the start of the year and ease financial burdens. PriceBeo will ease consumers' burdens by figuring out exactly where to go to get the best deals and cheapest shopping. PriceBeo will partner with Garron Noone to advertise this New Year campaign.

Garron Noone:

Garron Noone is a social media influencer with 2.8 million followers on Instagram and 2.4 million followers on TikTok. He posts content about Irish culture, comedy, everyday life, music and food. He often posts videos where he complains about the price of products in certain stores. One of his videos was a supermarket speed tierlist where he ranked the major Irish retailers from best to worst. His content is relatable to the PriceBeo consumer base. He is an ideal partner for PriceBeo as his content matches PriceBeo's message of trying to find the cheapest shopping for consumers. He appeals to the target audience of young college students and middle aged parents and would be an ideal fit for PriceBeo. He will post content on his platforms promoting the 'New Year new savings' campaign and how PriceBeo can help save time and money. The total cost of this collaboration will be €5k.

Garron Noone - Social media estimated metrics:

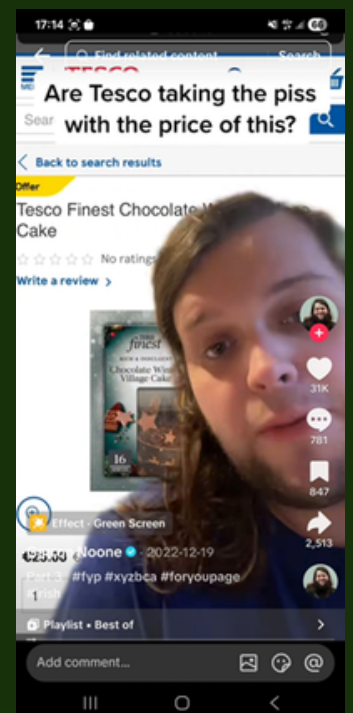

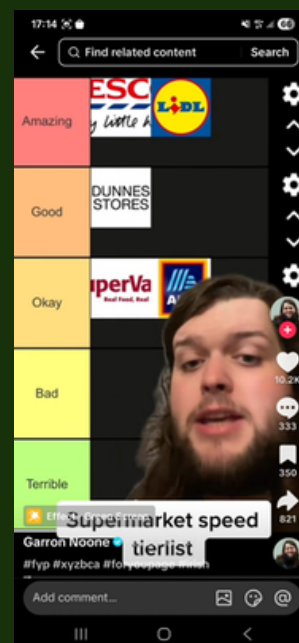

Views: 110,000

Likes: 4,000

Comments: 150

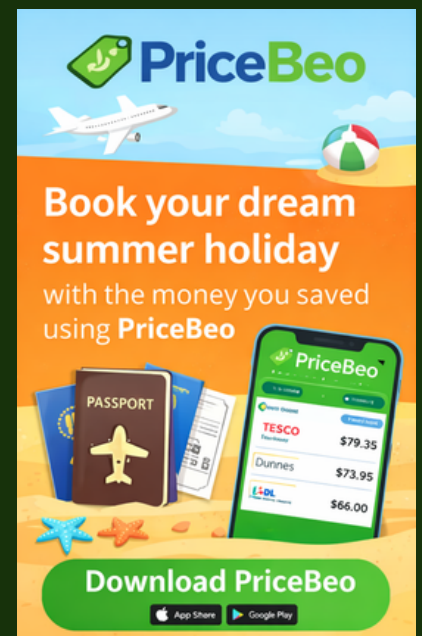

Shares/Reposts: 400

Engagement rate: 4%

2. Summer Holidays Campaign

PriceBeo will launch a campaign at the start of June celebrating the summer holidays. Summer can be an expensive time of year particularly for middle-aged parents whose children are off from school. Summer holidays are something that everybody looks forward to and PriceBeo believes that everyone deserves a holiday. In 2024 consumers spent an average of €2,922 per person on flights, spending money and accommodation for their holidays in 2024 (Morahan, 2024). The total spend increases throughout the age groups from €2,414 spent by the 18-34 group, €2,941 in the 35-44 group, and €3,360 among 45-54 year-old and declining to €3165 in the 55+ group (Morahan, 2024). With rising inflation rates this will continue to get more expensive.

PriceBeo's targeted groups of young college students and middle-aged parents are suitable for this campaign. While the college students may spend less on holidays they also earn significantly less than any other cohort and will benefit greatly from savings. Middle aged parents spend the most on holidays, so will also benefit significantly from the savings PriceBeo can provide them. PriceBeo will have the tagline 'save big to travel far'. PriceBeo will emphasise how their app can provide users with hundreds of euros in savings, allowing them to travel on a much needed summer holiday. PriceBeo will partner with the 2 Johnnies Podcast to promote this campaign.

The 2 Johnnies Podcast

The 2 Johnnies Podcast consists of the Irish comedy duo Johnny B and Johnny Smacks who are famous for their podcast, live shows and social media content. Their listeners are largely between 18-45 which is suitable for the PriceBeo target market. They post about anything from GAA to chicken rolls. They previously launched their own price saving campaign in 2020 where they aimed to keep the price of chicken rolls below €4. They can use this experience to promote PriceBeo and ensure that Irish people can get the cheapest groceries to help them afford their holidays. Their podcast has a correspondence section where listeners email in about a weekly topic. The 2 Johnnies will talk about the benefits of PriceBeo and how savings used can be spent on plane tickets. They will then get listeners to send in stories about how and where they used PriceBeo and where they plan on going on holidays this summer. The total cost of this collaboration will be €3k.

Estimated Podcast campaign metrics:

Podcast impressions: 300,000
Website visits: 25,000
App downloads: 8,000
Conversion Rate: 32%
CPA cost: €1.50

3. Back-to-school campaign August-September

PriceBeo will launch a back-to-school campaign in August and September. This can be an expensive time of the year, particularly for parents with school-going children. The 2025 Barnardos Back to School Report highlights the difficulties parents face when trying to afford education costs for their children. Half of primary (50%) and 60% of secondary school parents stated that they are concerned about meeting these costs (Barnardos, 2025)

PriceBeo empathises with these parents and as a result have decided to launch the back-to-school campaign which aims to alleviate the financial burden faced by parents. PriceBeo will use social media to communicate this message, with videos being posted on their social platforms including 'how to build the cheapest weekly lunchbox'. There will be a tutorial video on how to use the PriceBeo app and which store could produce the cheapest lunchbox. E.g. Lidl. Sample lunchbox: Bread, ham, cheese, yoghurt, bananas, apple juice and popcorn.

The shopping basket feature will allow parents to put their exact child's lunch into the app, and it will instantly calculate which shop would be the cheapest. Alternatively, parents can use the scan feature in-store. PriceBeo will team up with Julia Haynes to help promote this campaign.

Julia Haynes is a social media influencer with 227k followers on Instagram and 189k followers on TikTok. She posts content about parenting, family life and home life and also often posts content about where to find the cheapest groceries. Her target audience are mostly mothers from 30-45. These factors make Julia the perfect partner for PriceBeo as she relates to the PriceBeo target audience and has similar content. Julia will post Instagram and TikTok videos explaining how PriceBeo can be used to save money on back-to-school shops and explain all the benefits of the app. This will help significantly boost app downloads and premium subscriptions coming into September. The cost of this collaboration will be €3k.

4. Organic Advertising - Scan it & Prove it Social Media Challenge

PriceBeo will launch a nationwide TikTok and Instagram competition encouraging users to actively test the accuracy of the app in real shopping situations. The campaign will invite users to scan a product in-store using PriceBeo and, if they find a cheaper verified price elsewhere that is not reflected on the app, they are encouraged to upload their find onto the app or tag us on our social media platforms.

Participants who successfully identify a lower verified price and share their video using the campaign hashtag, will receive one month of free premium subscription access. This approach increases engagement while reinforcing transparency and confidence in our platform's pricing data.

By encouraging user-generated content, the campaign builds credibility through real consumer participation rather than traditional advertising. It also aligns with PriceBeo's brand values of transparency, empowerment and community

5. Grocery Transparency Report

PriceBeo will publish a quarterly Grocery Transparency Report comparing pricing across major Irish retailers. The report will highlight the cheapest weekly basket, category-level price differences and emerging pricing trends.

To strengthen credibility, PriceBeo will benchmark selected findings against publicly available grocery data sources such as Kantar market reports and other recognised retail industry publications. Aligning insights with established industry data enhances transparency and positions PriceBeo as a serious contributor to pricing discussions rather than simply a promotional platform.

The report will be distributed through LinkedIn, social infographics, press outreach and email newsletters. By contributing evidence-based insights into grocery pricing trends, PriceBeo strengthens its authority and builds trust with consumers.

The report will be distributed through LinkedIn, social infographics, press outreach and email newsletters. By contributing evidence-based insights into grocery pricing trends, PriceBeo strengthens its authority and builds trust with consumers

Research & Development

R&D

PriceBeo's technical development is split across three functions, each working alongside outsourced specialists. App development, backend engineering and cybersecurity are handled by external contractors, while the founding team oversees progress through regular reviews and clear deliverables.

Mobile Development

React Native app, UX/UI design and feature implementation for iOS and Android.

Compliance

GDPR adherence, data encryption, privacy documentation and regulatory alignment.

Backend Engineering

REST API, PostgreSQL database, retailer API integrations and data pipeline management.

R&D Cycle

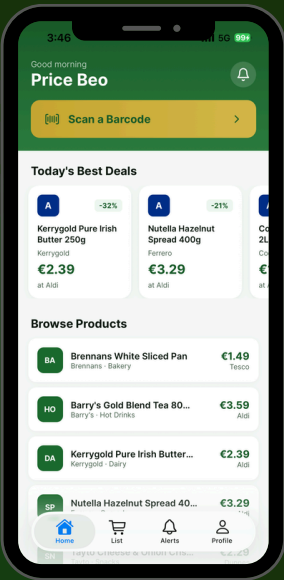

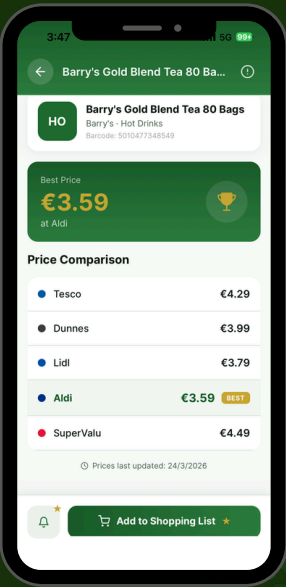

We follow an agile development process built around short cycles of testing, learning and improving. This keeps development focused on what users actually need rather than assumptions, and allows us to catch problems early before they become costly (Ries, 2011). The approach is rooted in the Agile Manifesto's principles of iterative delivery, regular feedback and adapting to change (Beck et al., 2001).

- | | |
|----|---|
| 01 | Discovery & Validation
Identifying unmet consumer needs through primary research (80-person survey, three in-depth interviews) and consultation with Quidu, Ireland's leading price comparison platform, who confirmed the technical model is realistic at scale in the Irish market. |
| 02 | Rapid Prototyping
A final-year DCU Computer Science student built a proof of concept demonstrating that EAN-13 barcode scanning via Google ML Kit is technically feasible, achieving reliable detection in 1–2 seconds. This validated the core scanning technology that underpins PriceBeo, confirming it can be implemented using free, well-documented tools without specialised infrastructure. |
| 03 | Field Testing
The application will be deployed to a controlled group of Irish grocery shoppers to gather feedback on scanning reliability, price accuracy and overall user experience under real in-store conditions. |
| 04 | Iterative Optimisation
Insights from field testing feed directly into sprint cycles, refining the user interface, expanding product database coverage and improving data accuracy before full public launch. |

Product/Service Development

Shopping Basket Comparison

A new premium feature where users can scan or search for multiple items and add them to a basket. The app then works out which retailer offers the cheapest total for that specific basket, and notifies the user daily or weekly. One week Dunnes might come in at €80, the next week SuperValu could offer the same basket for €68.

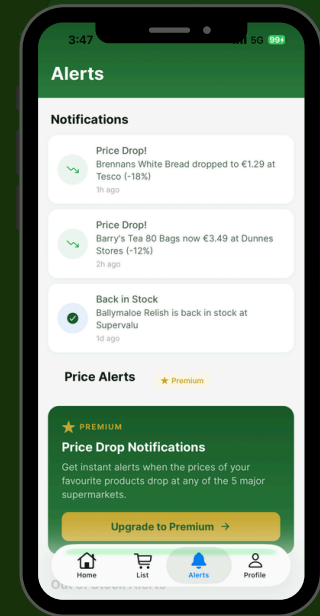

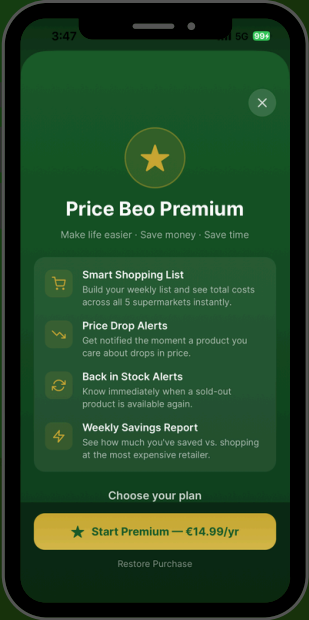

Historical Price Trends

Letting users see how prices for specific products have changed over time across all five retailers. This helps people spot patterns, like when certain items tend to drop in price, so they can time their purchases better and budget more predictably.

Retailer API Partnerships

Moving away from web scraping and towards formal API partnerships with all five major retailers. Under this model, supermarkets provide structured data feeds with barcodes, product names and prices directly from their trading departments. Quidu already operates this way in Ireland with over 40,000 products, and Trolley.co.uk does the same in the UK. Compared to scraping, this gives us cleaner data, real-time hourly updates and proper commercial relationships with each retailer.

AI-Powered Personalised Recommendations

Using a user's scanning history to suggest cheaper alternatives and better-value products they might not have considered. Rather than just showing what something costs now, the app would actively point users towards savings they'd otherwise miss.

Patents, Copyrights & Brands

Protecting PriceBeo's intellectual property is central to its long-term competitive position. While the platform does not rely on patentable inventions, its value sits in proprietary software, brand identity and commercially sensitive data relationships. The strategy below covers each layer of protection the business will put in place to ensure its core assets are legally safeguarded from the outset.

Patents

PriceBeo does not require a patent. The platform is built on existing open-source technologies such as React Native, PostgreSQL and Google ML Kit, rather than a novel invention, so patent protection does not apply. Instead, the business will operate as a Private Limited Company and rely on retailer partnership agreements to secure exclusive data access, protect commercial relationships and create a defensible competitive moat. This aligns with CCPC (2025) guidance on transparency and fair market practices in the Irish grocery sector.

Copyrights

All original content created by PriceBeo is automatically protected under the Copyright and Related Rights Act 2000. This covers:

Mobile application source code and user interface designs.

Educational materials and website content.

Marketing materials including videos, social media content and graphics.

Database schema and API integration logic.

This prevents competitors from copying or reusing any of PriceBeo's original work. Where third-party open-source components are used, the team will maintain a licence compliance register to meet all obligations.

Trademarks

The PriceBeo name, logo and tagline "Scan, Compare, Save" will be registered as trademarks with the Intellectual Property Office of Ireland (IPOI) under **Class 9** (mobile applications and software) and **Class 42** (software as a service). Registration typically takes six to nine months from filing and provides ten years of renewable protection. This follows WIPO's guidance for start-ups to protect both the technical and brand elements of their product (WIPO, n.d.).

Any contracts with external developers will include IP assignment clauses so that PriceBeo retains full ownership of the platform code and data processes. This is in line with IBEC (2025) recommendations on IP protection for digital businesses. Should PriceBeo expand into the UK or EU market, equivalent filings will be made with the UK IPO or EUIPO respectively.

Beyond formal registrations, commercially sensitive information such as retailer API integration methods, product matching algorithms and user behavioural analytics will be protected through NDAs with all contractors and partners, governed by the EU Trade Secrets Directive (2016/943) as transposed into Irish law.

Meet the Team

CEO

Emily leads overall business strategy, investor relations, and strategic partnerships. She is responsible for defining PriceBeo's vision, securing funding, and positioning the business for scalable growth. Her role ensures clear strategic direction and alignment across all functions of the business.

COO

Emily leads operations, project management, and execution across the business. She ensures alignment between product development, retailer partnerships, and day-to-day delivery, translating strategy into measurable outcomes. Her placement at Aldi provided first-hand exposure to the inefficiencies PriceBeo addresses, directly informing the product's design and positioning.

CFO

Amy manages all financial planning, reporting, and funding activity. Her financial oversight ensures capital is deployed efficiently against growth targets, and that the business maintains the runway required to reach profitability by Year 2. This financial discipline is central to PriceBeo's lean operating model.

CMO

Fergus leads user acquisition, brand development, and growth strategy. His commercial focus ensures that marketing investment is targeted, measurable, and directly tied to the MAU targets that underpin the financial projections making user growth a managed process rather than an assumption.

CTO

Aleksander has validated the technical feasibility of real-time barcode scanning and multi-retailer price comparison within a scalable cloud architecture. His technical leadership de-risks the product roadmap and ensures the infrastructure can support growth from 15,000 to 75,000+ monthly active users without proportionate cost increases.

Staffing

PriceBeo will hire the following staff on a part time basis to help support our business as we grow.

App Development

Software Developer: to build our app ensuring all technical aspects function to perfection.

Data Analyst: to ensure all prices displayed on the app are accurate and up to date.

UX Designer: to design our app to stand out and retain our users.

Legal & Customer Support

Legal Advisor/ Solicitor: manage data protection under GDPR, data usage rights, terms of service, intellectual property protection and investor agreements.

Customer Support Agent: manage customer queries or complaints, build FAQ support, manage app store reviews.

Marketing

Marketing Manager: run paid social media campaigns, build relationships with influencers, manage social media presence and track CAC.

Retail Expert: Collaborate with an expert to expand our knowledge and understanding of the grocery market.

Finance

Accountant: set up company structure, manages taxes, ensure VAT compliance, manages invoices and payroll

Financial Advisor: advice on exit strategy and investment opportunities.

Training

Training delivery is structured across four phases that directly align with PriceBeo's marketing initiative timeline and product development milestones.

Phase 1 · Q1 2027 (Jan-Mar)->Foundation & Launch Readiness

- Mandatory GDPR and cybersecurity training for all founders
- Fergus completes Meta & TikTok Business certifications ahead of "Scan It & Prove It" launch
- Aleksander begins React Native and advanced PostgreSQL training
- Amy completes start-up finance and GDPR practitioner courses
- Emily H. begins leadership programme (Enterprise Ireland NewFrontiers)
- Emily D. obtains Google Project Management Certificate
- All-team product knowledge session: full app walkthrough and user journey mapping

Phase 2 · Q2 2027 (Apr-Jun)->Capability Building & Campaign Execution

- Fergus completes GA4 certification and SEO/content course to support Grocery Transparency Report (Marketing Initiative 2)
- Aleksander completes Firebase/GCP certification for cloud scaling
- Emily D. attends Retail Excellence Ireland conference; CRM platform training begins
- Amy attends LEO and Enterprise Ireland grant management workshops
- Emily H. undertakes consumer behaviour short course (Coursera/DCU)
- Data literacy workshop delivered to all team members
- Quarterly KPI review: training impact assessed against download analytics and engagement rates

Phase 3 · Q3 2027 (Jul-Sep)->Partnerships, Community & Product Expansion

- Emily H. completes partnership negotiation training ahead of advocacy collaborations (Marketing Initiative 3)
- Fergus attends influencer and partnership marketing masterclass
- Aleksander completes Power BI advanced training for KPI dashboards
- Aleksander obtains CompTIA Security+ certification
- Emily D. completes CRM and lifecycle marketing training for Initiative 5 rollout
- All-team product session: Shopping Basket premium feature technical briefing
- External hiring begins and onboarding training protocol established for new customer support staff

Phase 4 · Q4 2027 - 2028->Retention, Scaling & Future Product Development

- Amy completes advanced financial modelling training for investor reporting
- Emily D. completes quality management training to support growing operational complexity
- Emily H. undertakes investor pitch coaching ahead of Series A discussions
- All marketing staff complete advanced analytics training for the PriceBeo Grocery Index launch (2028)
- Technical team upskilling for new product features: personalised recommendations algorithm, price-drop notification system
- Annual training review: all programmes assessed, updated, and re-enrolled where necessary
- External hires (developers, data engineer, customer support) complete structured 3-month onboarding programme

Training for Future Hires

As PriceBeo scales from a founding team of five to a broader organisation from Year 2 onward. A structured onboarding programme will be essential. The following framework will apply to all external hires.

Role (Planned Hire)	Onboarding Training	Link to Product/Strategy	Timeline
Mobile App Developer	PriceBeo codebase induction, API documentation review, DCU CS mentor sessions, GDPR technical requirements	Shopping Basket feature build; barcode scanner updates	Q3 2027
Data Engineer	Database architecture training (3-table PostgreSQL system), API partnership data pipeline, quality assurance processes	Real-time pricing accuracy; PriceBeo Grocery Index (2028)	Q3 2027
Customer Support Agent	Full product walkthrough, customer communication protocols, CRM system training, GDPR data handling procedures	Retention & lifecycle strategy; user trust and satisfaction	Q3–Q4 2027
Marketing Manager	PriceBeo brand guidelines, TikTok/Instagram campaign tools, GA4 analytics, content calendar management	Social campaigns; "Ireland's Savings Movement" community initiative	Q1 2028
UX Designer	PriceBeo design system review, user persona training, accessibility standards, app store optimisation guidelines	Ongoing UX improvements	Q1 2028

Operations

Premises

PriceBeo is a digital business so therefore does not require a traditional office space. Our team can work remotely or from a low cost co-working space in Dublin such as Dogpatch Labs. As we scale and grow as a team office space will become a priority but at this stage we have no need for premises, warehouses or physical storefronts at this stage.

Equipment

Our equipment needs are relatively modest. Every team member will need a laptop and a range of tech devices covering different iPhones and Android models to ensure PriceBeo works correctly on the range of phones. Our developers will need high specification machines to scrape, store and document our data.

Production Facilities

PriceBeo has no physical production facilities our production environment is entirely digital. Our cloud hosting where the app backend runs, database servers, development and staging environments where new features are tested before launching and continuous integration pipeline that automates testing and deployment. All of these features run on cloud infrastructure rather than physical servers.

Infrastructure

Cloud hosting will be done through Amazon Web Services to run application servers and store our price data. A commercial EAN database will be stored to match scanned barcodes to actual products. A content delivery network will ensure our app loads quickly for users all over Ireland. SSL certificates and security infrastructure will protect our user data under GDPR requirements. Automated monitoring and alerting tools so our developer knows immediately when something is not running how it should.

Operations

Communication Facilities

Internal communication will be primarily through Zoom or Microsoft Teams for daily use while Notion will be used to track development work. External communication will be attached to our business email info@pricebeo.ie. In Year 1 we will work with Zendesk to manage customer queries before the introduction of our customer support agent in Q3 of 2027

Costs Involved

Co-working space in Dublin costs from €500 per month. Equipment purchased upfront costs €10,000. Cloud infrastructure ranges in cost from €500 to €2,000 a month in Year 1 but will rise to €3000 by year 3. Software costs for development tools, communication platforms and monitoring services cost €500 a month. App store developer cost €99 a year for Apple and €25 for Google. A legal retainer for GDPR compliance and data usage agreements cost €750 a month. Monthly operational costs in Year 1 are roughly €2,550.

Suppliers

PriceBeo's suppliers are almost entirely digital. Cloud provider AWS supplies our technical infrastructure. Google supplies the ML Kit barcode scanning technology. A commercial EAN registry supplies the product matching data that connects a scanned barcode to an actual named product. Mobile app distribution suppliers are Apple through the App Store and Google through the Play Store. Stripe serves as our payment processor and handles all premium subscription billing. Our push notification supplier Firebase handles price alerts and notifications. Finally our data sources which are Tesco, Dunnes Stores, Lidl, Aldi and Supervalu are our most critical suppliers because even though they are not paid suppliers without their data our app does not function.

Financial Projections

Key Assumptions

The following tables outline the key financial assumptions used in the projections for PriceBeo.

The financial model is based on a scalable digital platform, where growth is driven primarily by increasing monthly active users and improving conversion rates over time. As the user base expands, revenue increases across premium subscriptions, advertising, and affiliate income streams, while costs grow at a slower rate.

Operating expenditure is structured across marketing, product development, and administrative costs. Marketing represents the primary driver of early growth, supporting user acquisition and brand awareness. Staffing costs are based on a lean structure in Year 1, with gradual increases in salaries and headcount, including the addition of a developer and customer support role as the business scales.

Technology-related costs include ongoing app development, cloud infrastructure, and external development support, with a transition to in-house development by Year 3. Costs are largely variable and linked to platform usage, including server, API, and payment processing fees.

The business is funded through a combination of personal investment, grant funding, and a bank loan, with cashflow supported by upfront funding during the initial growth phase. Taxation, depreciation, and loss relief assumptions are applied in line with standard Irish business practices. Overall, the assumptions reflect a business that invests heavily in early growth, before achieving profitability as scale increases and recurring revenue streams strengthen over time.

PriceBeo · Key Financial Assumptions		
REVENUE MODEL		
Premium Subscription Price	€2.99 per user / month	Base case pricing
Ad Revenue per Free User	€0.40 per user / month	Banner ads within app
Affiliate Revenue per MAU	€0.20 per user / month	Retailer click-through / referral basis
Variable Cost of Sales	8% of total revenue	Server, API and payment-processing fees
VAT Rate (Digital Services)	23%	Revenue and P&L shown ex-VAT throughout

USER GROWTH – ORGANIC (NO EXTERNAL INVESTMENT)		
Year 1: Opening MAU (Jan 2027)	1,500	Soft launch
Year 1: Closing MAU (Dec 2027)	15,000	Organic social / referral growth
Year 2: Opening / Closing MAU	15,500 → 35,000	Developer hire from Jul 2028 supports scaling
Year 3: Opening / Closing MAU	36,000 → 75,000	CS hire from Jul 2029
Year 1: Premium Rate	16% → 27%	Ramp over 12 months
Year 2: Premium Rate	27% → 33%	Ramp over 12 months
Year 3: Premium Rate	33% → 37%	Ramp over 12 months
STAFFING / PAYROLL		
Year 1 – Founder Salary Each	€18,000 / year (€1,500 / month)	5 founders = €90,000 total
Year 2 – Founder Salary Each	€25,000 / year	5 founders = €125,000 total
Year 2 – Developer (from July)	€45,000 annualised / 0.5 year in 2028	Cash cost €22,500 in FY2028
Year 3 – Founder Salary Each	€35,000 / year	5 founders = €175,000 total
Year 3 – Developer (full year)	€45,000 / year	Full-year cost in FY2029
Year 3 – Customer Support Hire (from July)	€30,000 annualised / 0.5 year in 2029	Cash cost €15,000 in FY2029
Employer PRSI assumption	9.15% below €552/week; 11.40% above €552/week	Post-1 Oct 2026 Irish Class A rates held constant for forecast purposes
EXTERNAL DEVELOPMENT / OPEX		
Year 1 External Dev Budget	€1,200 / month (€14,400 / year)	Maintenance only – major build already capitalised
Year 2 External Dev Budget	€1,000 / month (€12,000 / year)	Reduced as in-house developer joins
Year 3 External Dev Budget	0	Fully in-house by Year 3
Cloud / Infrastructure	Modelled monthly on scaling basis	See Model Inputs tab
Marketing		
FINANCING & TAX		
Bank Loan (AIB)	€49,000 at 8.95% APR, 5 years	Monthly repayment: €1,013
Personal Investment	€55,000 (5 × €11,000)	Share capital
Grants	€47,500 total	GradStart €30k + LEO €15k + Grow Digital €2.5k
Opening Cash Balance (1 Jan 2027)	€45,000	After pre-trading spend and capitalised setup assets
Corporation Tax Rate		
Loss Relief	Year 1 loss carried forward against Year 2 profit	Balance exhausted in FY2028
Depreciation / Amortisation	€19,800 per year	App development + equipment; patents carried at cost

The Profit and Loss projections illustrate strong revenue growth over the three years. In Year 1 (FY2027), PriceBeo operates at a net loss of €79,354 due to significant investment in app development, marketing, and pre-trading setup costs, alongside a one-time grant income of €47,500.

By Year 2 (FY2028), the company reaches profitability as the user base expands and revenue from subscriptions, advertising, and affiliate income scales. Year 3 (FY2029) sees strong profitability of €386,583 driven by high gross margins and the scalability of the digital platform.

Projected revenue grows from €99,440 in Year 1 to €403,919 in Year 2 and €938,625 in Year 3, reflecting expanding MAU and a rising premium conversion rate. The gross margin remains at 92% throughout, demonstrating the low variable-cost nature of the business model.

Balance Sheets 2027-2029

PriceBeo · Balance Sheet ·

TOTAL LIABILITIES & EQUITY	41,600	103,196	533,310

The Balance Sheets reflect the financial position of PriceBeo over the three-year period. Assets primarily consist of cash reserves and intangible assets such as the app platform and technology infrastructure.

Liabilities include initial funding and operational expenses. Over time, retained earnings increase as the company becomes profitable, strengthening the equity position of the business.

The company maintains a strong financial structure with low debt levels and increasing shareholder value, supporting long-term sustainability and growth.

CLOSING CASH BALANCE	33,892	23,439	13,872	4,884	(3,286)	(10,389)	(17,108)	(22,564)	(26,257)	(28,413)	(28,175)	(25,051)	(25,051)	81,396	531,310

The Cash Flow Forecast shows PriceBeo experiencing negative cash flow for most of Year 1 (FY2027), primarily driven by initial development, payroll, and marketing expenditures ahead of revenue build-up. The opening balance of €45,000 reflects founder equity investment and grant funding after pre-trading setup spend. The business enters overdraft from May 2027, reaching a low of (€28,413) in October, before recovering in Q4 as subscription revenue grows.

By FY2028, the business returns to a positive cash position, closing the year at €81,396. FY2029 delivers strong cash generation, closing at €531,310. The bank loan (€49,000 at 8.95% APR, 5-year term) is repaid at €1,013 per month throughout.

Sales Pipeline

The table below presents PriceBeo's sales pipeline across three revenue categories: retailer affiliate and data partnership agreements, in-app advertising deals with Irish FMCG brands, and projected premium subscription revenue by consumer cohort. Probability estimates reflect the stage of commercial discussions, the strength of the product value proposition for each prospect, and industry conversion benchmarks for early-stage Irish app businesses.

Name of Customer	Size of Deal	Date PO Expected	Probability % of Getting Sale
Retailer Affiliate & Data Partnership Agreements (revenue share based on MAU)			
Tesco Ireland	€18,500 p.a.	Q2 2027	60%
Dunnes Stores	€15,000 p.a.	Q2 2027	55%
SuperValu / Musgrave Group	€12,500 p.a.	Q3 2027	50%
Lidl Ireland	€10,000 p.a.	Q3 2027	45%
Aldi Ireland GmbH & Co. KG	€10,000 p.a.	Q4 2027	40%
In-App Advertising Agreements (CPM/CPC campaigns targeting active grocery shoppers)			
Kerrygold / Ornu Co-operative	€8,000 p.a.	Q2 2027	65%
Brennan's Bread (IAWS Group)	€5,500 p.a.	Q3 2027	55%
Barry's Tea Ltd	€4,500 p.a.	Q3 2027	50%
Flahavan's Ltd	€3,500 p.a.	Q4 2027	45%
Odlum's	€3,000 p.a.	Q4 2027	35%
Avonmore / Glanbia Ireland	€4,000 p.a.	Q1 2028	30%
Consumer Premium Subscription Revenue (B2C freemium conversion, projected by cohort)			
Premium Subscribers - H1 2027 Cohort	€13,752	Q1–Q2 2027	85%
Premium Subscribers - H2 2027 Cohort	€44,039	Q3–Q4 2027	80%
Premium Subscribers - FY2028 Growth	€264,733	FY2028	75%
TOTAL PIPELINE VALUE	€420,525		Weighted average: ~44%

Funding Requirements

PriceBeo requires total funding of €151,500 to successfully launch, acquire its initial user base, and reach cash-flow positivity by the end of Year 2. This section details the full funding structure, the specific use of the investment sought through this process, and the valuation basis for the equity being offered.

The funding requirement is met through a combination of founder investment, non-dilutive grant funding and a commercial bank loan. Together, these sources provide full capitalisation for PriceBeo's Year 1 operations.

Funding Source	Amount	Notes
Founder Investment (5 x €11,000)	€55,000	Equal cash contribution from all five co-founders. Share capital.
GradStart Grant (Enterprise Ireland)	€30,000	Secured grant for early-stage graduate-led startup. Year 1 only.
LEO Dublin City Grant	€15,000	Local Enterprise Office support for product development and market entry.
Grow Digital Grant	€2,500	Digital transformation and digital marketing support grant.
Bank Loan (AIB)	€49,000	€49,000 at 8.95% APR over 5 years. Monthly repayment of €1,013.

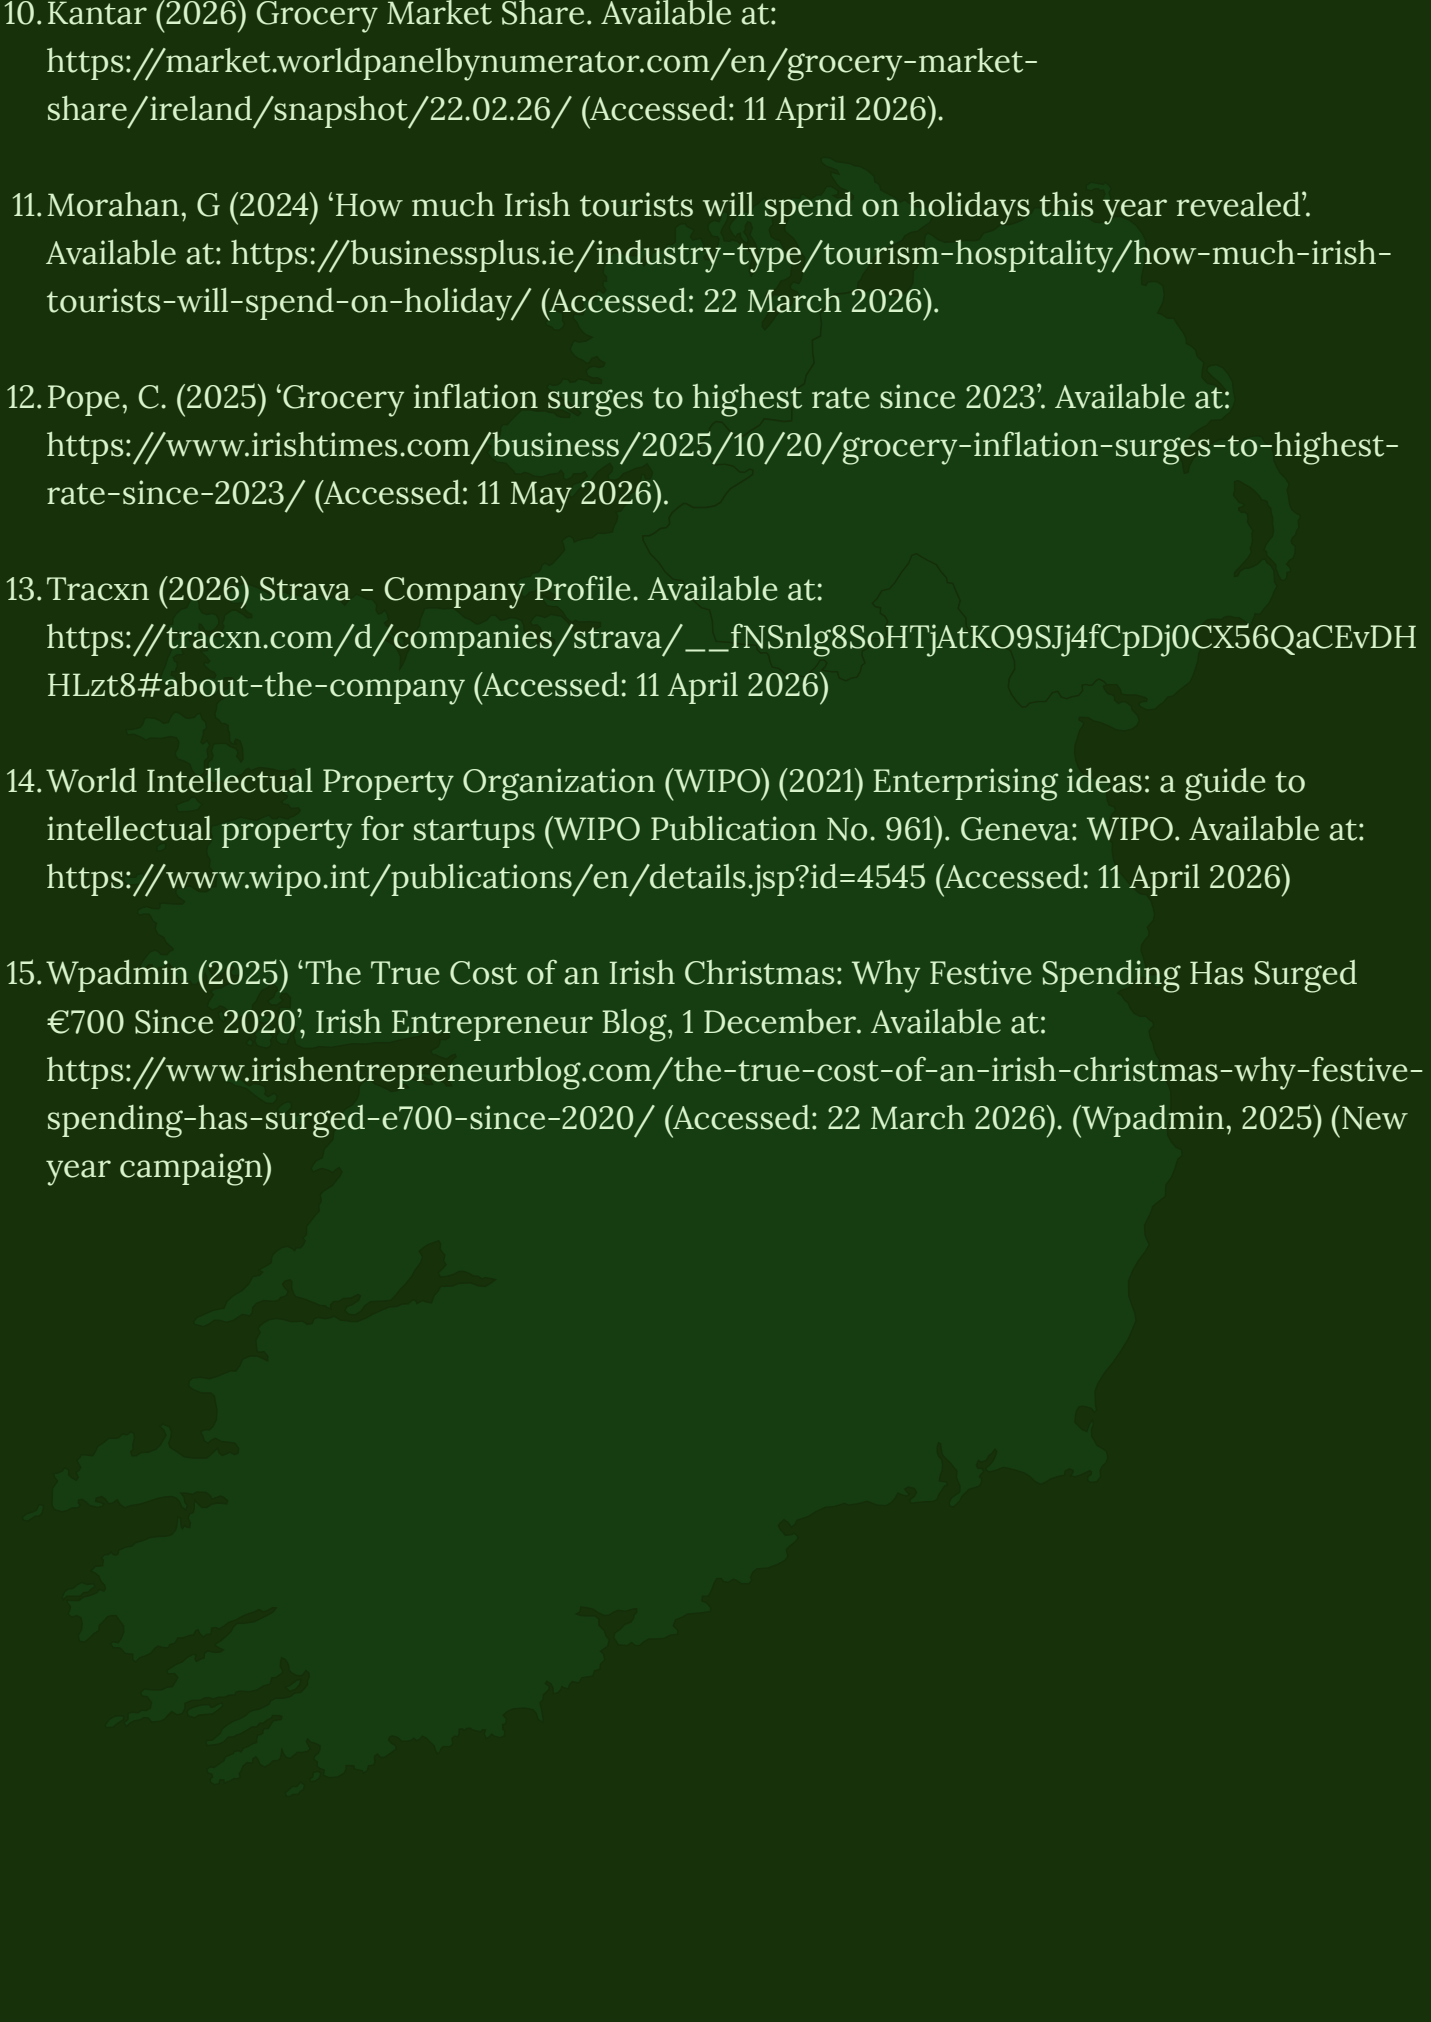

Use of Funds

Category	%	Amount	Notes
Product Development	40%	€60,600	App building, Data scraping, barcode scanning engine, cloud storage, IOS and Android release.
Marketing & User Acquisition	35%	€53,025	Social media campaigns, App Store optimisation, influencer partnerships, PR and launch events targeting early users.
Talent & Contractors	15%	€22,725	External development support, cybersecurity contractor, customer support, legal advisory.
Contingency & Working Capital	10%	€15,150	Reserve funds for unexpected delays, regulatory requirements.

The €151,500 use of funds will be deployed across four categories, each directly tied to achieving the Year 1 milestones outlined in our business plan.

Appendices

Value Proposition Canvas

Value Map

Customer Profile

Customer Empathy Map

Gain

- Confidence in getting the best price
- Save between €20 to €50 per month
- Clear comparisons across stores

Pain

- Unsure if they're getting the best price
- Prices change too often
- No time to compare stores

Interview Transcripts

Interview 1: Male Customer, Age 63

1.How often do you shop for groceries?

Every day except for Saturdays and Sundays.

2.How do you usually decide where to do your shopping?

I nearly always go to Dunnes Stores because it is the closest shop to me. I don't really think about it too much.

3.Do you ever compare prices between stores? If so, how do you compare prices?

I don't tend to compare prices between shops. Sometimes I'll complain about the prices, but I don't compare prices.

4. What frustrations have you experienced when shopping?

I buy a lot of microwaveable rice. Sometimes there is a 3 bags for €5 deal on and sometimes they are sold individually for €2.79. I would prefer it if I knew before I went to the shop what price the rice was going to be and the price of other goods.

5.What are your initial thoughts on an app that scans barcodes and instantly compares prices across the five major retailers, Tesco, Lidl, Aldi, Dunnes Stores, and SuperValu?

Sounds good if it works.

6.What do you think would be the most significant benefits of using an app like this?

Saving money.

7.Do you have any concerns about using a price-comparison app?

I wouldn't want it taking too much of my personal information.

8.Would this app influence where you shop or what brands you choose?

If I could save money, I might go to other shops that are also close to where I live.

9.Would you be willing to pay a monthly subscription to use this app and if so, how much?

I would be willing to pay a small amount if it did save money, no more than €5 a month.

10.What additional features or benefits might you add to improve this app?

Maybe a way of seeing where the cheapest products are before going to the shop

Interview 2: Female Customer, Age 60

1.How often do you shop for groceries?

Once a week, either on Saturday or Sunday.

2.How do you usually decide where to do your shopping?

I will often go to Dunnes Stores if I need a few bits, or I might go to Supervalu for high-quality meat from the butcher.

3.Do you ever compare prices between stores? If so, how do you compare prices?

No, I don't tend to compare prices, but when I'm in Dunnes Stores I'll often use a spend €25 and get €5 off voucher.

4.What frustrations have you experienced when shopping?

Sometimes the items that I try to get are out of stock, also sometimes some items are surprisingly expensive, Tropicana orange juice in Dunnes Stores was over €5 for a litre.

5. What are your initial thoughts on an app that scans barcodes and instantly compares prices across the five major retailers, Tesco, Lidl, Aldi, Dunnes Stores, and SuperValu?

I think that this could be very useful, especially for families with a large number of children that might need to save as much money as possible.

6.What do you think would be the most significant benefits of using an app like this?

If it could save time and money.

7.Do you have any concerns about using a price-comparison app?

I'm not good with technology so if it was very complicated, I wouldn't use it. If it was straightforward I would use it.

8.Would this app influence where you shop or what brands you choose?

would be open to shopping elsewhere if it saved money. I would still continue shopping for meat at Supervalu for their meat, but for other groceries I would be open to shopping elsewhere.

9.Would you be willing to pay a monthly subscription to use this app and if so, how much?

If it was easy to use and beneficial then I would pay a monthly subscription for it. Probably about €2-€4.

10.What additional features or benefits might you add to improve this app?

I would just make sure that it is easy to use and that I don't need to spend three hours trying to sign in to use it

Interview 3: University Student, Age 21

1.How often do you shop for groceries?

Usually two to three times a week. I buy small amounts more often rather than doing one big shop.

2.How do you usually decide where to do your shopping?

Mostly based on price and convenience. I live near a Lidl and Aldi, so I usually go there. If I need something specific, I might go to Tesco.

3.Do you ever compare prices between stores? If so, how do you compare prices?

Not properly. I have a general idea that Lidl and Aldi are cheaper, but I don't compare item by item. Sometimes I check Tesco Clubcard prices online, but it's time-consuming.

4.What frustrations have you experienced when shopping?

Prices changing all the time. Also, some items in Lidl/Aldi don't exist in the other shops, so it's confusing to know whether I'm actually saving money. I also hate walking into a shop and realising something is way more expensive than I expected.

5.What are your initial thoughts on an app that scans barcodes and instantly compares prices across five major retailers?

I think that would be very useful, especially for students. We're always trying to save money. If the app made it easy to see which shop had the cheapest basket, I'd absolutely use it.

6.What do you think would be the most significant benefits of using an app like this?

Saving money and stopping impulse overspending. Also planning meals for the week without guessing where things are cheaper.

7.Do you have any concerns about using a price-comparison app?

Just accuracy. If I use it in a shop and it shows the wrong price, it would be annoying. I'm not worried about privacy as long as it doesn't ask for unnecessary permissions.

8.Would this app influence where you shop or what brands you choose?

Yes, definitely. If I see something is cheaper at Tesco or Aldi, I'd go there. I'm not loyal to any store. Students go wherever is cheapest.

9.Would you be willing to pay a monthly subscription to use this app and if so, how much?

Probably yes, but only if it saved me more than it cost. Maybe €0.99 or €1.99 a month. I wouldn't pay more than €2.

10.What additional features or benefits might you add to improve this app?

Maybe a weekly meal planner connected to the cheapest ingredients. Also notifications when something I regularly buy drops in price
